Art Unit: 3765

1. In light of applicant maintaining that an election of the method was made or was intended to be made during the telephone conversation of March 19, 2003 the following written restriction requirement is made. The last Office action mailed March 26, 2003 (Paper No. 5) is hereby vacated.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a multilayer helmet shell, classified in class 2, subclass 411.
- II. Claims 6-16, drawn to a method of making a multilayer helmet shell, classified in class 264, subclass 259.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process such as spraying both sides of a sheet-like central layer to define inner and outer layers then pressing the joined layers to define a helmet shell.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Should applicant elect the invention of Group II applicant is further required to elect as this application contains claims directed to the following patentably distinct species of the

Art Unit: 3765

claimed invention: Species I including the method of shaping or using a shaped sheet (claims 6-12, 14 and 15); and Species II including the method without the sheet (claims 13 and 16).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
